

Aeromobilities (International Library of Sociology)

Aeromobilities is a collection of essays that tackle in many different ways the growing importance of aviation and air travel in our hypermobile, globalized world. Providing a multidisciplinary focus on issues ranging from global airports to the production of airspace, from airline work to helicopters, and from movement in airports to software systems, Aeromobilities seeks to enhance our understanding of space, time and mobility in the age of mass air travel. From Sao Paulo to Sydney, Aeromobilities draws on local experiences of airspaces to generate theory and research that are global in scope. It is the first book of its kind, bringing together a wide range of theoretical and methodological approaches to aviation and air travel in the social sciences and humanities, while emphasizing the central role of aeromobilities in contemporary social relations. In a world where virtually every aspect of social life is touched upon, in one way or another, by the complex global network of airline flows, with its large passenger aircraft and iconic international airports, Aeromobilities provides innovative analyses of some of the most fundamental and influential mobility networks of our time.
