

Visual Basic 5 Made Easy

Visual Basic 5 Made Easy, Second Edition, is designed for use in an introductory course in programming with Microsoft Visual Basic 5. It presents the material practically, coherently, and in depth, making use of extensive step-by-step instructions and model application building. This book is ideal for class use and for students learning Visual Basic on their own. The book is built from the ground up on extensive, step-by-step examples providing instruction in programming concepts and techniques, supported by a wealth of screen-captured illustrations that help readers work through each step at the computer. Each chapter builds upon concepts and examples presented earlier, and the main programming exercises all contribute to a Personal Information Manager (PIM) application that the student builds from scratch. This cumulative project allows the student to fully explore all aspects of Visual Basic 5 while creating a useful application -- incorporating a notepad, alarm clock, appointment calendar, to-do list, and address list - that they can use to organize their daily activities. Visual Basic 5 Made Easy prepares readers to create and execute VB applications, understand basic concepts of file access, build links from applications to relational databases, and master the practical use of the latest object linking and embedding techniques.
