

Exploring Multimodal Composition and Digital Writing (Advances in Multimodal and Interactive Technologies)

While traditional writing is typically understood as a language based on the combination of words, phrases, and sentences to communicate meaning, modern technologies have led educators to reevaluate the notion that writing is restricted to this definition. Exploring Multimodal Composition and Digital Writing investigates the use of digital technologies to create multi-media documents that utilize video, audio, and web-based elements to further written communication beyond what can be accomplished by words alone. Educators, scholars, researchers, and professionals will use this critical resource to explore theoretical and empirical developments in the creation of digital and multimodal documents throughout the education system.
