

Numerical Control Machine and NC Machining Technology (the 12th five-year planning teaching material of regular higher education of industry and ... vocational education) (Chinese Edition)

It introduces the selection of NCM process system from the aspects like numerically controlled lathe, milling machine, machining centre equipment selection, process scope, and tooling. Then following the machining processes of parts, it respectively introduces industrial analysis, programming, and operational approaches of numerically controlled lathe, milling machine, and machining centre parts. Finally, it introduces routine maintenance and trouble shooting methods. It can be used as the teaching material for higher vocational school electromechanical and mold majors.
