

Multimedia Technology for Standardized E-Portfolio: Design and Implementation

Focusing on contemporary technology skills to develop educational multimedia applications, *Multimedia Technology for Standardized E-Portfolio: Design and Implementation* contains fourteen well-developed modules sorted into three sections: 1. Multimedia Technology Applications; 2. Web Page Design; and 3. Electronic Portfolio. Products from the first section can be used as the contents of a technology portfolio. The second section introduces skills to deliver an online portfolio. The last section reviews the procedures of design, development, and implementation of an eportfolio. After completing this book, students will be able to create an e-portfolio CD and an online portfolio. This book can also be used as a self-paced study guide; each module was developed as an independent unit. When using for a class, the instructor can determine the sequence of the modules, or select any module that fits the particular goals of teaching. Demonstrating the most current technology in education, the modules have been continually revised to keep up with the rapid development of technology over years. Before the next edition of this book, further updates on the materials, if any, will be posted on this website:
