

Changing the Interface of Education with Revolutionary Learning Technology

Dr. Sonwalkar, a highly regarded innovator and educational scientist, takes readers through a journey starting with the notion of paradigm shift that is necessary for the evolution of the next generation of the on-line education. The change in the interface of the higher education is achieved by the proposal of a multi-dimensional framework that describes the educational field in a learning cube composed by the dimensions of the multi-media, learning models and interactivity. With this important framework, author described the pedagogical framework that allows effective educational modules that are primarily driven by the pedagogical pathways. The framework that lands itself to the multi-dimensional evaluation that on the parameters of the Learning Cube describing pedagogical effectiveness index (PEI) The PEI along with five factored summative evaluation then leads to the a uniform rating scheme for evaluation of the on-line courses. The power of the proposed framework then extends in optimizing individual learning performance which is the ultimate goal for an adaptive learning system. The author then also describes a practical method to develop on-line courses with the educational technology standards to achieve interoperability of the learning modules on numerous learning management systems using SCROM learning objects.
