

Population Studies (Introductions to Sociology)

The Introduction to Sociology series aims to present foundational sociology in a unique way. The series introduces students to debates that are current and alive in modern sociology, especially those in southern Africa. As they move from topic to topic, students will build up an advanced repertoire of technical language and concepts. Discussions are always clear and accessible. Coherently structured with a developing and cumulative theme, each book is written in a lucid, logical, and organised way, promoting the fundamental skill of sequential argument that all students must learn at university level. In addition, exercises at the end of each book are carefully constructed to develop cognitive skills. Population Studies is an introduction to the field, its fundamental concepts and major writers, especially those relevant to southern Africa and the developing world.
