

# Modeling 3-D Manikins: A Primer for Virtual World Developers

Virtual Worlds have the potential to transform the way people learn, work, and play. However, a key barrier in the development of virtual worlds especially for business, technical, and non-artistic individuals is the ability to model human figures in 3-D for use as avatars and automated characters in virtual worlds. There are no articles in either research or teaching journals which describe methods that non-artists can learn quickly in order to create 3-D human figures. This primer presents a repeatable and flexible method I have taught successfully to both artists and business students, which allows them to quickly model human-like figures (manikins) that are sufficient for prototype purposes and for exploring the development of new kinds of virtual worlds.
